Caring for your new succulent

Here are some quick tips to keep your plant happy:

- Provide lots of bright, indirect sunlight
- Water once a month during the winter and every 7-10 days in spring and summer
- Make sure to poke the hole through the bottom of the pot for drainage

Did you know you can up-cycle an empty yogurt container to repot your plant when it outgrows its original pot?

We look forward to finding out how your succulent's doing when we next see you!

Join us at School Streets

Our next event will be [School Streets 2026](#) in February where we will be supporting and showcasing how we can make our school spaces healthier and safer for both children and the wider community.

Did you know we offer **free CPD** sessions...
