

# Are utilities preventing you from digging a rain garden?

## If so, our Hybrid SuDS Planter is the answer

We have developed a modular system that combines the benefits of a rain garden with a SuDS planter, avoiding the need for deep excavation.

### How does it work?

**Capture:** Rainwater flows down and into the planter from surface-level drains.

**Storage:** The Hydrorock base layer holds and absorbs the rainwater.

**Capillary Rise:** The stored water slowly moves up through the soil, keeping the plants watered.

**Gradual Release:** Excess water evaporates or drains slowly into the local system.
