

Sign up to our free Urban Greening CPD

Urban greening has become a vital part of **public realm schemes**. Our lunchtime CPD session will teach your team how to **design, install** and **maintain** all aspects of green infrastructure.

We also specialise in providing practical advice on how to incorporate SuDS into your landscaping projects.

We can tailor our sessions towards:

Architects, local authorities, developers, designers, utilities companies and engineers.

How boosting biodiversity in the heart of London is good for communities and business

In a consultation, **70%** of the Clerkenwell community said they wanted to improve biodiversity along [St John Street](#), a street that anchors the iconic

Smithfield Market. We collaborated with **Islington Council** and local community group, **Clerkenwell Pollinator Path**, to bring that vision to life.

Features include:

1500+ pollinator - friendly plants, seating, pathways, bee posts, ivy posts and bug hotels across **291m²** of planting

The project has helped to **boost biodiversity**, bring **higher footfall** to local businesses and improve **active travel**.
