

## Custom-made 6m SuDS planters installed at Great Park Academy, Newcastle

We installed a series of large-scale timber [SuDS planters](#) to manage rainfall and roof runoff. Each planter stretches over 6m in length, capturing rainwater directly from roof downpipes. Inside, a layered SuDS soil mix supports 450 drought-tolerant plants to keep the system working year-round while adding long-term greenery to the site.

### Designed to fit any site

As Meristem design and fabricate all our SuDS Planters in-house, this allows us to fabricate them to any size, shape and for any location based on the attenuation requirements of the building. This school building had a roof area of 800m<sup>2</sup>.

## What type of plants will suit your location?

Our team includes RHS trained horticulturists who can design a custom-made planting scheme tailored to the amount of direct and indirect sunlight for each SuDS Planter.

### Partial shade plants include:

Hosta

Heuchera plum pudding

Stipa tenuissima pony tails

### South facing sun plants include:

Calamagrotis karl forester

Salvia nem caradona

Verbena bonariensis
